National Nanotechnology Strategic Plan Providing Future Roadmap for Nanotechnology Innovations

The federal government has recently posted two reports online to share with the stakeholders in the nanoscience community. The first report, titled "Nanotechnology Research Directions for Societal Needs in 2020 " or Nano2, is the international long-term view, providing a retrospective of the last ten years (2000-2010) and vision for the next ten years (2011-2020). It was prepared with input from leading experts from 35 countries representing the broader community of academic, industry, and government stakeholders, including the NNI. The complete report, slides and webcast are available on the report Web site.

Using the Nano2 Report as input, the NNI prepared a draft of its 3-year Strategic Plan (2011-2013), which includes strategies for US government agencies in the context of a sustainable, long-term nanotechnology roadmap. We encourage all members of the nanotechnology community to review the original Nano2 Report and offer further input and feedback on the draft NNI Strategic Plan, which is available through the NNI Strategy Portal.

Comments will be accepted until November 30.

battery and electrochemical capacitor device technologies. Carbon nanotubes (CNT) have gained widespread attention for a range of electrochemical energy storage and conversion device applications given their unique properties, including electrical conductivity, high surface area, and chemical and mechanical stability. Lee and colleagues investigated a new class of electrodes for energy storage devices facilitated by Li⁺ reactions with functional surface groups on the MWNT electrode structure. Combining this with a high surface area transition metal oxide lithium storage material at the opposing negative electrode, the authors have demonstrated unprecedented performance for energy storage device electrodes potentially impacting a range of hybrid applications. R&D100 Editor Awards for Carbon Nanotubes Goes to Hyung Gyu Park and Colleagues at LLNL

For the second consecutive year, LLNL has won a coveted Editors Award at the annual R&D100 Awards presentation, sponsored by R&D Magazine. This year, the honor went to Hyung Gyu Park—an InterNano contributor—and Francesco

Fornasiero, for their work developing nanostructured membranes for water purification. The technology has been licensed to Porifera, Inc. of Hayward. Only three Editors Awards are given out of the 100 awards. [More....](#)

NanoBusiness Alliance Interview with Lynn L. Bergeson

The NanoBusiness Alliance continues its interview series with Lynn L. Bergeson, Managing Director, Bergeson & Campbell, P.C. (B&C). Lynn is one of America's top EH&S practitioners and is the

Chairman of the NanoBusiness Alliance's EHS Committee. B&C is a Washington, D.C. law firm concentrating on conventional and engineered nanoscale chemical, pesticide, and other specialty chemical product approval, regulation, litigation, and associated business issues. Ms. Bergeson counsels clients on a wide range of issues pertaining to
